

DIY Capacity Project

Your task is to change a plain plastic bottle into a measuring bottle. This is called calibrating.

You need:

1. strip of sticky paper / masking tape
2. lentils / rice / water
3. a 2 litre bottle
4. a 100ml measuring cup
5. a 50ml measuring cup

- Stick a strip of sticky paper vertically on the side of your 2 litre bottle.
- Fill the 100ml measure with lentils/rice...
- Pour them into the 2 litre bottle.
- Make sure the lentils are level.
- Mark 100ml on the strip of paper/masking tape, at the top of the pile of lentils.
- Complete your scale by marking 100ml intervals until your bottle is full of lentils.

To make it easier to pour the lentils use a funnel!

You now have a scale that will measure to the nearest 100ml.

Can you use a 50 ml measuring cup to improve on this?

- Use your bottle to find the capacities of some other containers you can find around the house!

Remember that you might need to estimate between two intervals!

Let's have fun with water!

Look at the different objects below.

Each has a different capacity.

250ml

5ml

500ml

Using the objects above, how many different ways can you think of, to fill a jug with exactly 1ℓ of water?

$$4 \text{ cups} = 250\text{ml} + 250\text{ml} + 250\text{ml} + 250\text{ml} = 1,000\text{ml} \text{ or } 1\ell$$

$$2 \text{ bottles} = 500\text{ml} + 500\text{ml} = 1,000\text{ml} \text{ or } 1\ell$$

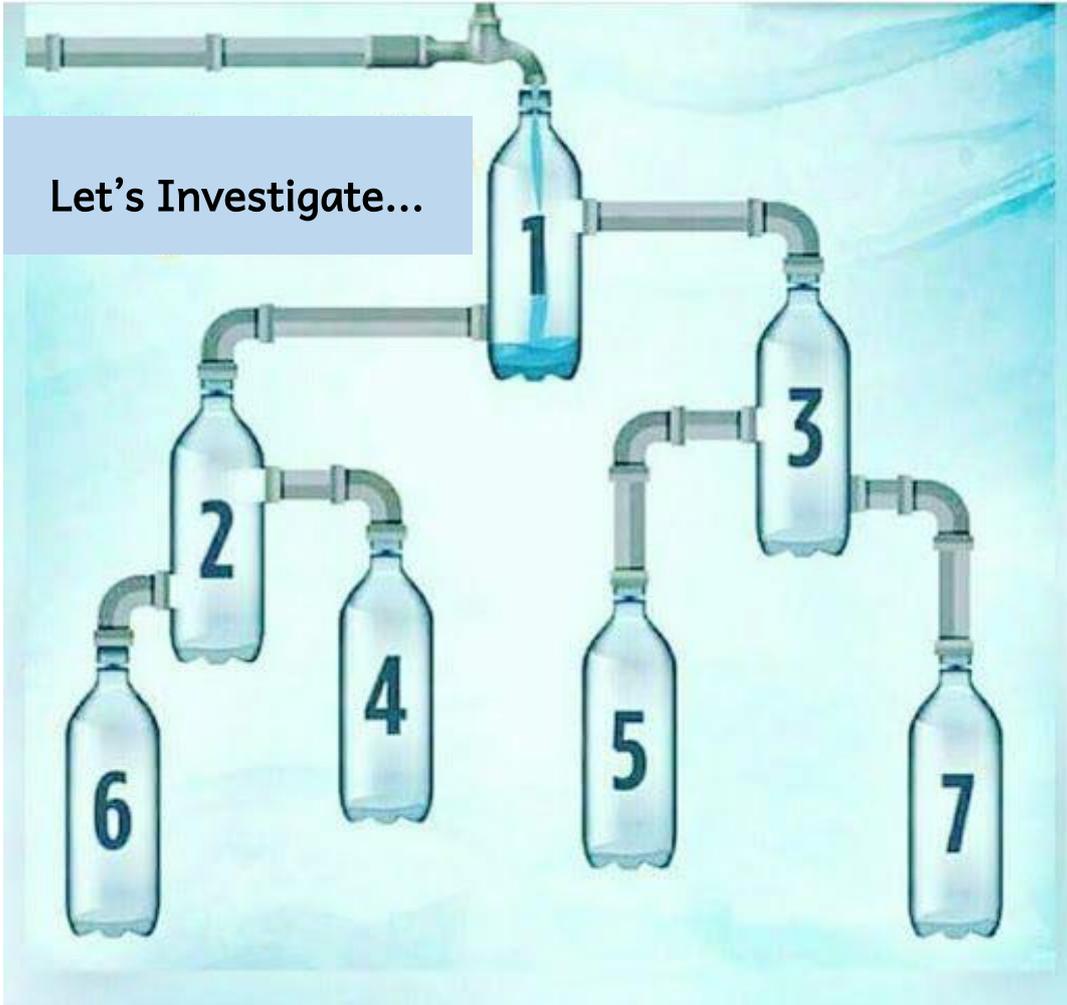

$$1 \text{ bottle and } 2 \text{ cups} = 500\text{ml} + 250\text{ml} + 250\text{ml} = 1,000\text{ml} \text{ or } 1\ell$$

$$1 \text{ bottle and } 100 \text{ times a teaspoon} = 500\text{ml} + (5\text{ml} \times 100) = 1,000\text{ml} \text{ or } 1\ell$$

$$1 \text{ bottle, } 1 \text{ cup and } 50 \text{ times a teaspoon} = 500\text{ml} + 250\text{ml} + (5\text{ml} \times 50) = 1,000\text{ml} \text{ or } 1\ell$$

$$1 \text{ cup} + 150 \text{ times a teaspoon} = 250\text{ml} + 750\text{ml} = 1,000\text{ml} \text{ or } 1\ell$$

$$200 \text{ times a teaspoon} = 5\text{ml} \times 200 = 1,000\text{ml} \text{ or } 1\ell$$

Which bottle is going to be filled up first? Bottle 6

In the boxes below, write the numbers of the different bottles, in order of how they are going to be filled up.
