

## Party Bag Investigation

The twins Topsy and Tim Parker will be turning ten soon. They will be having a birthday party. For this party they will invite **18** of their friends and give them goody bags at the end of the celebration. Topsy and Tim, will be **getting one too**. For each party bag, mum needs to buy **an empty party bag, a yoyo, a balloon, a chocolate bar and a lollipop**. Their mum wants to prepare the party bags, but she doesn't have enough time to visit more than one shop. To help her out, the twins have to work out the total cost from two different shops in their town, using the pricelists:

## Investigations:

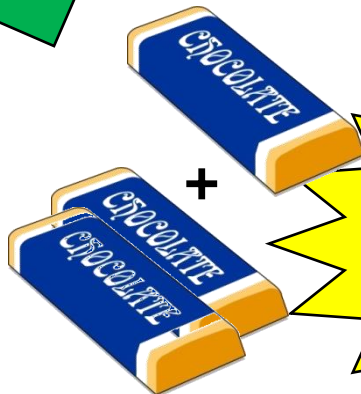

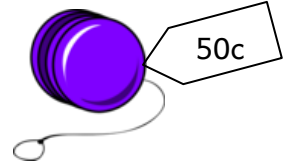

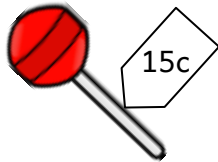

a) From which shop are the products **cheaper**?

b) How much difference is there between both prices?

c) To get the **cheapest deal**, Topsy and Tim decided to visit both shops and buy the cheaper product. Which products are they going to buy from each shop?

d) What is the **new total cost**?
