

Calibrating Capacities – Part 2

You now have a scale that will measure to the nearest 100ml.

Can you use the 50ml measure to improve on this?

Use your bottle to find the capacities of some other containers.

You may need to estimate between two intervals!

1. Can you measure out 25ml of lentils using the 50ml and 100ml bottles?

2. What about 10ml?
