

You will need a hanger (a thin one), 10 pegs and numbers from 1 to 10.

Hang the pegs loosely on the hanger. Count each one as you do. You may match number cards whilst you count.

Slide groups of pegs to each side of the hanger to find pairs of numbers which make ten.

Say 3 and 7 make 10.

Put a number card next to each group of pegs (3 and 7) or write $3 + 7 = 10$

Practise taking away any number from 10.

Say 10 take away 3 leaves 7 or write $10 - 3 = 7$

Find other ways.

Group the pegs in twos

Count them 2, 4, 6, 8, 10

Use your hanger as a balance. Hang it onto a door handle.

Slide some pegs to one side and the rest to the other.

Which side is heavier? Which side is lighter? Why?

9 is more than 1

Find other ways.

You may wish to repeat the steps up to the number 20.
