

Easter Bunny Napkin Origami

Open the napkin.

Fold it in half lengthwise.

The napkin has a shape of a rectangle.

Fold it in half again lengthwise to form a long, thinner rectangle.

What fraction of the original square is this?

A quarter or $\frac{1}{4}$.

Find the midpoint of the rectangle along the top edge. Fold both ends at the top of the rectangle down through the midpoint of the napkin.

Fold up both bottom corners to meet in the centre along the line in the middle. Now the napkin has the shape of a diamond/square.

Bring left and right edges together on the centre line. Your napkin should now be shaped like a **kite**.

Flip shape upside down and turn over.

Fold bottom vertex up to form a **triangle**.

To fasten, fold left and right corners back; tuck one corner into the pocket of the other.

Turn the napkin left to right so the bunny is facing you. Is the turn made a **clockwise** or an anticlockwise turn?

Pull out bunny ears first then open up base. Can you **estimate the length** of the bunny's ears?

Decorate the house with your cute napkin bunnies!
